

Siemens synchronous wall clock

Les Pook
© 2011 Sevenoaks, UK

Figure 1 shows a Siemens synchronous electric wall clock. The off white glazed ceramic case is $8\frac{1}{2}$ " high \times 13" wide \times 2" deep. The dial is $6\frac{3}{4}$ " diameter with black Arabic numerals and hands. It is marked 'SIEMENS'. The large dots are screws holding the movement to the case. A rear view is shown in Figure 2. The interior of the case is marked 'IWC'. The metal movement cover is marked 'Hebel niederdrücken dann loslassen' (Pull lever then release). The movement is not self starting, but the seconds hand acts as a tell tale.
