Figure 1 shows a Seth Thomas Yukon-3E Model No. E011-066 synchronous electric mantel clock. The brass case is 5" high × 6" wide × 2" deep. The dial is 3¾" diameter with black Arabic numerals and hands, and a brass seconds hand. There is an aperture for a power out indicator at 6 o'clock. A rear view is shown in Figure 2. Markings on the movement cover include 'YUKON-3E', 'MODEL NO. E011-006' and 'SETH THOMAS CLOCKS THOMASTON, CONN. U.S.A.'. Yukon-3E appears to be the model name. The clock was made for the British market and some marking have been altered, neatly, from those appropriate for the American market to those appropriate for the British market. Also, the Model No. was changed from E011-04 to E011-06. The movement is self starting. Normally, the power out indicator is white. It shows red if the power has been out and the time shown is therefore incorrect. Resetting the time resets the power out indicator to white.
